

Metal roofing is one of the best investments you can make to boost the beauty, longevity, energy efficiency and sustainability of your home. Discover what metal roofing can do for you.

DURABILITY

Metal roofing has an impressive lifespan, often lasting more than 50 years with a warranty to match. This long life comes from metal roofing's ability to withstand intense weather without cracking, shrinking or eroding. A metal roof means a longer roof life with less maintenance, saving you money.

ENVIRONMENTALLY FRIENDLY

Manufactured with recycled material and 100% recyclable at the end of its lifespan, metal roofing is the most environmentally friendly option for your home. Many metal roofs can also be installed over an existing roof, eliminating the environmental impact of disposal. Metal is also solar friendly, making it simple to install and providing an easy upgrade to your home.

ENERGY & COST EFFICIENT

Increase the value of your home and save up to 40% on energy bills by investing in a metal roof. Cool-metal roofing reflects solar rays, increasing the efficiency of your air conditioning when you need it most. With its low lifecycle cost, simple maintenance and strong performance through intense weather, metal roofing is an investment that can save you money in the long run.

ATTRACTIVE + VERSATILE

Metal roofing complements any architectural style with its variety of designs, styles and color options. Now, you can have the look of wooden shake, slate, shingles or clay, all with the added strength and long lifespan of metal.
