FlashCo Adds PVDF Painted Edge Metal to Product Offering

FlashCo is expanding its Edge Metal Systems with the addition of PVDF Painted edge metal for low-slope roofing systems. The new PVDF edge metal will be sold in 25 different colors, including 12 fast ship colors. FlashCo PDVF edge metal profiles include drip edge, gravel stop, and sloped and flat coping. All PDVF edge metal is made to order in 10 foot lengths and manufactured in FlashCo's 8 plant locations throughout the U.S.

"We have had a lot of success with our TPO and PVC coated metal," says FlashCo President, Greg Morrow. "The PVDF painted edge metal is really a natural extension of our Edge Metal Systems. We already have the equipment in place for making the profiles needed in the industry and with our locations throughout the country, that gives FlashCo another opportunity to save roofers time."

FlashCo's PVDF edge metal products are manufactured using 24-gauge, G90 galvanized steel sheet that is painted with Kynar 500® or Hylar 5000® resins. The painted steel provides superior color retention and allows FlashCo to offer non-prorated coating warranties for most applications. In addition, FlashCo will offer 24-gauge galvanized metal cleats as an option for all painted edge metal profiles.

"With our extensive background selling coated metal, we understand the challenges of getting metal to the job site undamaged," says Greg. "Our strategically located plants allow us to deliver most jobs on our own trucks. Therefore, we handle the metal from beginning to end and that

makes a huge difference in avoiding damage, or other issues. We know how important it is to deliver on time and ready to use.”

FlashCo will debut its new PVDF Edge Metal line at the 2022 Western States Roofing Expo, and at the 2022 RCAT/MRCA Roofing Conference. More information on FlashCo’s PVDF Edge Metal Systems visit flashco.com/edge-metal-systems.

About FlashCo

Founded in Sonoma County, California, FlashCo has grown to be one of the largest manufacturers of roof flashings and accessories in North America with seven plant locations in the U.S. For over 20 years, FlashCo has been a trusted source for dependable pre-fabricated accessories for the immediate needs of roofing contractors, distributors, and industry-leading roofing material manufacturers. A reliable partner who delivers quality products with responsive support, FlashCo prides itself in delivering a timely and dependable experience.

Trusted by major manufacturers for use as part of full system warranties, FlashCo manufactures standard and custom flashings for roofing contractors installing TPO, PVC, BUR, shingle, and clay tile roofing systems. Contractors can find FlashCo products at hundreds of roofing supply distributors located throughout the U.S. and Canada.
